

SupaSTOCK is a Inventory Management and Stock Control System that enables you to manage multiple quantities of Configuration Items in **SupaCMDB**. Inventory can be tracked from purchase through to customer installation and eventual decommissioning. Serial number entry can either occur at requisition time or when issuing to a customer.

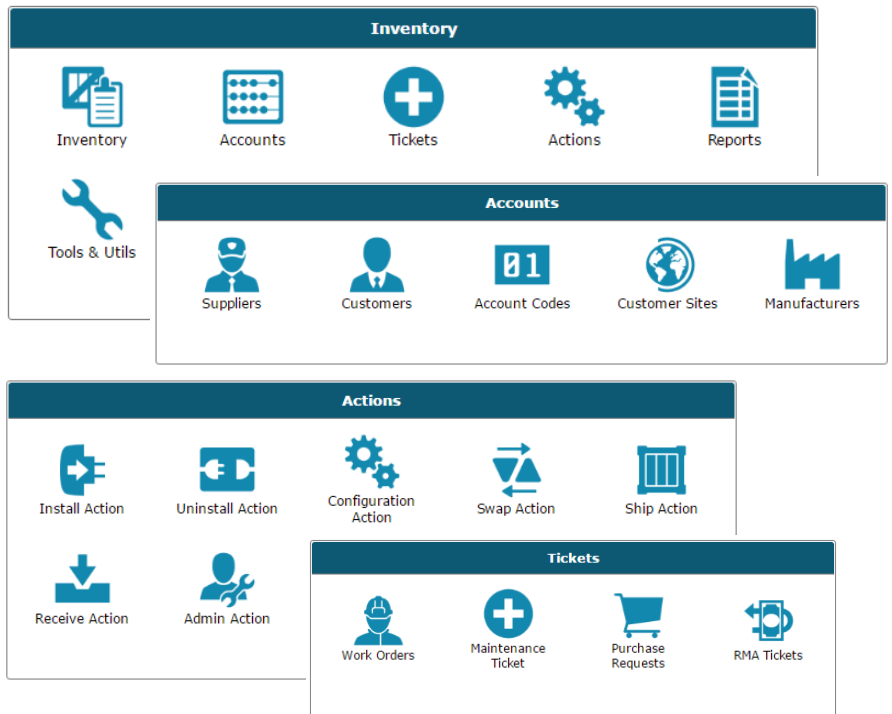

Your inventory can be managed easily with a one-click listing of all managed items, to show on hand, in transit, installed and under repair counters.

Installation and maintenance actions can all be tracked through the use of specialised Tickets.

View items installed at a particular Customer Location, or search items stored within your Warehouse Shelving Units.

SupaSTOCK key features:

- ✓ 4 level location
- ✓ Product batches
- ✓ Serial no. entry
- ✓ Preferred suppliers
- ✓ Customer accounts & sites
- ✓ Manufacturers
- ✓ Min and Max thresholds
- ✓ Part Swaps
- ✓ Ship/Receive
- ✓ Full life-cycle history

SupaSTOCK integrates with all other **SupaTools** modules to combine Change, Incident and Inventory management into one system.

SupaSTOCK is a 100% web-based application that can be installed on your internal network, or accessed via our secure cloud infrastructure. Visit <http://www.supatools.com> for more information and to register your interest!
